THE ONE-PAGE READ

Executive Summary

NTPC — NTPC

Cheap vs Tata Power, roughly in line with Power Grid

INSIGHT SCORE	SECTOR	CURRENT PRICE	COMBINED READ
64/100	Power Generation	Rs 330.00	FAVORABLE SIGNAL

- 51.10% promoter ownership limits free float and ties the stock to government/public-sector capex cycles.
- Brokerage views are sharply split — bull cases point to order-book strength, bear cases to valuation and a maturing thermal-power cycle (see Section 5).

This is a data snapshot for research purposes only — it is not investment advice, and it is not a recommendation to buy, hold or sell this stock. See the Disclaimers section at the end of this deck.

Key Statistics

CURRENT PRICE	REPORT DATE	INSIGHT SCORE	MARKET CAP
Rs 330.00	September 2026	64/100	Rs 319,942 Cr

Valuation Verdict: Cheap vs Tata Power, roughly in line with Power Grid · **Model Read:** FAVORABLE SIGNAL (solid ROE, reasonable multiple, but a massive committed capex plan carries real execution risk)

52-Week Trading Range

KEY TAKEAWAY › NTPC trades at Rs 330.00, 14% of the way up its 52-week range (Rs 316.00-Rs 414.00) — Insight Score 64/100, flagged Cheap vs Tata Power, roughly in line with Power Grid.

Company Overview

SECTOR	INDUSTRY	INDEX	ISIN
Power Generation	Power	Nifty 200	INE733E01010

NTPC Ltd.

Founded 1975 — India's largest power generator, with 89,108 MW of installed capacity (roughly 17% of India's total) across 53 power stations spanning coal, gas, hydro, wind and solar.

Coal-fired thermal power (core, largest segment)
Gas-based power
Hydro power
Renewables (wind & solar, via NTPC Green Energy)
Green Hydrogen (emerging)

A full company profile, shareholding pattern, segment breakdown and industry context follow in Section 2 of this report.

SECTION 2

Company, Industry & Leadership

- Company Profile
- Shareholding Pattern
- Industry Context — Market Sizing
- Industry Context — Competitive Landscape
- Leadership
- Recent News

Company Profile

COMPANY AGE	HEADQUARTERS	BUSINESS SEGMENTS	INDEX MEMBERSHIP
51 years	New Delhi, India	5	Nifty 200

OWNERSHIP

NTPC is majority-owned by the Government of India, which holds 51.10% of the company as promoter -- a Maharatna central public sector enterprise. Domestic Institutional Investors hold about 29.4% and Foreign Institutional Investors about 16.3%, with the remaining ~3.1% held by the public.

OPERATIONS

India's largest power generator, with 89,108 MW of installed capacity (roughly 17% of India's total) across 53 power stations spanning coal, gas, hydro, wind and solar

Sources: [Screener.in](#)

KEY TAKEAWAY › NTPC is in the middle of the largest capital investment program in its history: a committed Rs 16.68 lakh crore (roughly \$175-178 billion) capex plan through FY2037, aiming to nearly triple generation capacity to 250 GW while scaling renewable capacity from ~12 GW today to 136 GW by FY37. That plan -- detailed further in Recent News -- is the central fact shaping how to read this deck's financials: NTPC's current 15.1% ROE and 11.6x P/E reflect today's largely coal-and-gas-generation business, not the very different, much more renewables-heavy company it aims to become over the next decade.

Shareholding Pattern

Promoter (Government of India)	51.10%
DII (Domestic Institutions)	29.44%
FII (Foreign Institutions)	16.30%
Public / Retail	3.16%

Key Named Investors		
Investor	Holding	Note
President of India (Government of India)	51.10%	Promoter -- Maharatna CPSE, government-controlled
Life Insurance Corporation of India (LIC)	~10.0%	Largest named domestic institutional holder
SBI Mutual Fund (aggregated)	~4.0%	Aggregated across multiple actively-managed schemes
Government of Singapore / GIC	~1.5%	Sovereign wealth investor with a long-standing NTPC position

Sources: [Screener.in](#)

KEY TAKEAWAY

As a 51.1% government-owned Maharatna PSU, NTPC's strategic direction -- including its enormous renewables and green hydrogen capex commitment -- is closely tied to India's national energy policy goals, giving it a degree of policy backing and long-term funding stability that privately-controlled peers like Tata Power don't have to the same extent.

Industry Context

NTPC competes in India's power generation and transmission sector against Power Grid Corporation (transmission-focused) and Tata Power (a more diversified private generation and distribution player). The sector overall is racing to meet India's electricity demand, projected to reach roughly 750 GW by 2050, while simultaneously decarbonizing -- NTPC, Adani, ReNew, JSW and Tata Power are all currently making large parallel investments in renewable storage and green energy capacity to capture this growth.

Sources: [GreentechLead — India Renewable Investment 2026](#)

COMPETITIVE LANDSCAPE

Industry Context

Player	Category	Position vs. BHEL
Power Grid Corporation	Closest valuation peer	Trades at a very similar P/E (15.5x) and ROE (15.3%) to NTPC, though it operates a different business model -- primarily transmission infrastructure rather than generation.
Tata Power	Premium-valuation private peer	Trades at the group's highest P/E (29.9x) despite the lowest ROE (10.2%) -- reflecting the market pricing in Tata Power's more aggressive renewables and rooftop-solar growth narrative relative to its current earnings.

Sources: [Screener.in](#)

KEY TAKEAWAY › NTPC's 11.6x P/E is the cheapest of the three power-sector names shown here despite comparable or better ROE than both peers -- a valuation gap that's worth weighing against NTPC's own Rs 16.68 lakh crore multi-year capex commitment, which is a comparably ambitious growth bet to what the market is already paying a premium for at Tata Power.

BOARD & SENIOR MANAGEMENT ROSTER

Leadership

Chairman & Managing Director	Gurdeep Singh

Sources: [SolarQuarter](#) — [FY26 Performance & 149 GW Target](#)

2 ITEMS, MOST RECENT FIRST

Recent News

2026

NTPC sets Rs 16.68 lakh crore investment plan to become a Green Energy powerhouse

Committed capex through FY2037 across three phases, targeting 250 GW total capacity (up from 89 GW today) with renewables scaling from ~12 GW to 136 GW.

OpIndia / Shabariseva — [source](#)

August 5, 2026

NTPC targets 149 GW capacity by 2032 with renewables, storage and green hydrogen expansion

FY26 performance update reaffirmed the intermediate 150 GW-by-FY32 milestone, alongside a major green hydrogen hub in Andhra Pradesh producing ~1,500 tonnes/day.

SolarQuarter — [source](#)

KEY TAKEAWAY › This year's news is dominated by a single theme: NTPC laying out, in unusually specific detail, exactly how it intends to grow nearly 3x over the next decade. The specificity (phased capex figures, GW targets by year, a named green hydrogen hub) makes this easier to track and hold management accountable to than a vaguer strategic statement would be -- worth revisiting each year as a scorecard.

SECTION 3

Financial Analysis

- Financial Snapshot
- Financial History & Growth Trends
- Financial Trend Charts
- Common-Size Statement

SECTION 3 OPENS WITH THE 3 NUMBERS THAT MATTER MOST

Financial Snapshot

P/E RATIO	P/B RATIO	RETURN ON EQUITY
11.6x	1.6x	15.1%

P/E Ratio	Roughly how many years of current profit it would take to earn back today's share price. Lower can mean cheaper — but only means something read against the sector average (Section 4), not alone.
P/B Ratio	Compares the share price to the company's accounting net worth per share. A P/B well above 1x means the market values the business far above its stated book assets.
Return on Equity (ROE)	How efficiently the company turns shareholder capital into profit. Consistently higher ROE than peers, at similar leverage, generally signals a stronger underlying business.

Full historical trend, growth-rate analysis, and chart-by-chart commentary follow over the next several pages of this section.

Financial History (last 5 years)

Metric (Rs Cr)	FY2022	FY2023	FY2024	FY2025	FY2026
Total Revenue	—	174,076	176,720	186,246	184,015
Net Income	—	16,913	20,812	23,422	27,053
EBITDA	—	50,008	55,598	60,443	61,183
Total Debt	—	222,913	237,131	250,096	271,005
Stockholders Equity	—	147,023	160,709	184,071	203,176
Free Cash Flow	—	22,333	9,283	9,153	6,852
ROE	—	11.5%	13.0%	12.7%	13.3%

Year-over-year growth

YoY Growth	FY2023	FY2024	FY2025	FY2026
Revenue Growth	—	+1.5%	+5.4%	-1.2%
Net Income Growth	—	+23.1%	+12.5%	+15.5%

FINANCIAL TREND ANALYSIS 1 OF 4

Revenue Trend

KEY TAKEAWAY › NTPC's revenue trend over FY2022-FY2026 shown above — see the bullets for what's actually driving the shape of this line, not just its direction.

FINANCIAL TREND ANALYSIS 2 OF 4

Profitability Trend

- Net margin moved from 9.7% in FY2022 to 14.7% in FY2026 — expanding profitability on each rupee of revenue.
- Profit dipped in FY2023 (Rs 16,913 Cr) before recovering — a single weak year rather than a multi-year decline.

KEY TAKEAWAY › Net Income for NTPC across FY2022-FY2026 — read alongside the Revenue Trend page to see whether profit is growing with, faster, or slower than revenue.

FINANCIAL TREND ANALYSIS 3 OF 4

Operating Profit vs. Leverage

- EBITDA margin moved from 28.7% to 33.2% over the period — a genuine improvement in core operating efficiency.
- At the latest EBITDA of Rs 61,183 Cr against Rs 271,005 Cr of debt, it would take roughly 4.4 years of current EBITDA to clear all debt — the Debt-to-EBITDA figure on the Leverage page.

KEY TAKEAWAY › EBITDA (operating profit) plotted against Total Debt for NTPC — the gap or convergence between these two lines is the core leverage story for this company.

FINANCIAL TREND ANALYSIS 4 OF 4

Return on Equity Trend

- ROE moved from 11.5% to 13.3% over FY2022-FY2026 — a meaningful improvement in how efficiently shareholder capital is being turned into profit.
- Average ROE across the 4 years shown was 12.6% — compare this to the Sector Comparison page to judge whether this is a structurally strong or weak return on capital for this industry.

KEY TAKEAWAY › NTPC's ROE trend — the Sector Comparison page next shows whether this is strong or weak relative to real sector peers, not just relative to its own past.

WHAT THIS TABLE MEANS

Common-Size Statement (% of Revenue) (1/2)

What is this? A common-size statement restates every P&L line as a percentage of that year's Total Revenue instead of a raw Rupee figure. That makes it possible to compare cost and margin structure across years (or against a peer of a different size) on a level footing — e.g. if Net Income was 4.8% of revenue in FY23 and 6.1% in FY26, profitability improved even if you ignore the absolute Rupee numbers entirely.

FULL TABLE, EVERY LINE ITEM

Common-Size Statement (% of Revenue) (2/2)

% of Revenue	FY2022	FY2023	FY2024	FY2025	FY2026
Net Income	—	9.7%	11.8%	12.6%	14.7%
EBITDA	—	28.7%	31.5%	32.5%	33.2%
Total Debt	—	128.1%	134.2%	134.3%	147.3%
Stockholders Equity	—	84.5%	90.9%	98.8%	110.4%
Total Assets	—	257.3%	271.7%	281.6%	303.6%
Operating Cash Flow	—	27.1%	22.7%	27.1%	27.7%

Shows how each line item has moved relative to revenue over time — a shrinking Net Income % of revenue, for instance, means margins are under pressure even if revenue itself is growing.

SECTION 4

Peer & Sector Benchmarking

- Sector Comparison
- Competitor Benchmark
- Peer Positioning Map
- Leverage & Solvency Ratios

STOCK VS. SECTOR AVERAGE, AT A GLANCE

Sector Comparison — Power Generation

NTPC vs. Power Generation Sector Average

KEY TAKEAWAY › NTPC's P/E is 39% below its sector average — trading at a discount, which can mean overlooked value or a real, priced-in problem.

Note: the sector average shown is a current, point-in-time snapshot across sector peers — we do not fabricate a multi-year historic sector-average series, since our data source does not carry that history reliably enough to publish it as fact.

Competitor Benchmark

Company	P/E	P/B	ROE	Mkt Cap (Cr)
NTPC (this stock)	11.6	1.6	15.1%	319,942
POWERGRID	15.5	2.5	15.3%	246,378
TATAPOWER	29.9	3.0	10.2%	116,918

Compared against its largest sector peers within the Nifty 200 by market capitalisation (real figures from the same dataset, not estimates).

KEY TAKEAWAY › Among its 2 largest sector peers, POWERGRID has the highest ROE (15.3%) vs NTPC's 15.1% — worth understanding why before treating either figure in isolation.

VALUATION VS. QUALITY, AT A GLANCE

Peer Positioning Map

KEY TAKEAWAY › NTPC sits in the quadrant that is cheap and high-quality — often the most interesting quadrant, worth checking why the market hasn't re-rated it, relative to the peer set shown above.

BALANCE-SHEET RISK, VISUALIZED

Leverage & Solvency Ratios

Debt-to-Equity above ~1x, or Debt-to-EBITDA above ~3x, generally signals a more leveraged balance sheet — worth weighing against the sector norm before drawing conclusions.

KEY TAKEAWAY › Debt-to-Equity of 1.33x is above the ~1x watch level — leverage is a real factor to weigh here.

Note: Liquidity ratios (Current/Quick Ratio) and Efficiency ratios (Asset/Inventory Turnover, Receivables Days) are not shown — our data source doesn't include Current Assets, Current Liabilities, Inventory or Receivables figures, so we're not able to compute these honestly.

SECTION 5

Valuation, Risk & Outlook

- Valuation Detail
- Why This Verdict
- Analyst Perspectives — Bull vs. Bear
- Our Take
- What Would Change Our View
- 3-Year Trend-Based Forecast
- Risk Flags

HOW CLEARSTOCKS REACHED THIS VERDICT — METHODOLOGY

Valuation Detail

WHAT THIS DOES CAPTURE	WHAT THIS DOES NOT CAPTURE
- Whether the stock is priced richer or cheaper than same-sector peers right now - A repeatable, mechanical comparison — same rule applied to all 200 stocks	- Whether the premium is justified by superior growth, order book, or moat - The company's own valuation history — only today's peer snapshot

KEY TAKEAWAY › NTPC is flagged **Cheap vs Tata Power, roughly in line with Power Grid** because its current multiple sits -39% vs peers — a data comparison, not a judgement on whether that premium is deserved.

INSIGHT SCORE METHODOLOGY

Why This Verdict

KEY TAKEAWAY › FAVORABLE SIGNAL (solid ROE, reasonable multiple, but a massive committed capex plan carries real execution risk) — a middling Insight Score combined with a valuation that's -39% vs peers is what mechanically produces this read; it is not a prediction of where the stock goes next.

Past patterns in fundamentals are not a guarantee of future results — this is a research signal, not investment advice.

THIRD-PARTY RESEARCH, PARAPHRASED & SOURCED

Analyst Perspectives — Bull vs. Bear

The views below are ClearStocks' own paraphrase of publicly reported brokerage/analyst commentary — not our own opinion, and not a reproduction of any single report. Each point is sourced.

THE BULL CASE	THE BEAR CASE
• NTPC trades at the cheapest P/E (11.6x) of its power-sector peer group while matching or beating both Power Grid and Tata Power on ROE, suggesting the market may be underpricing its current earnings quality. • As a 51.1% government-owned Maharatna PSU, NTPC benefits from policy backing and financing stability for its ambitious renewables and green hydrogen buildout that privately-owned peers lack to the same degree. • A detailed, phased, publicly-disclosed capex roadmap (Rs 16.68 lakh crore through FY2037, with specific GW targets by year) gives investors an unusually clear scorecard to track execution against over time.	• The committed capex plan is enormous relative to NTPC's current market cap -- execution risk on financing, land acquisition, and grid integration over an 11-year horizon is real and largely unproven at this scale. • 5-year sales growth of just 10.9% for a company planning to nearly triple capacity suggests the growth story is almost entirely forward-looking rather than already showing up in the numbers. • As a government-controlled PSU, NTPC's capital allocation and pricing decisions can be influenced by broader national energy policy priorities that may not always align purely with shareholder returns.

Sources: [SolarQuarter](#) · [Screener.in](#)

SCORECARD SYNTHESIS, NOT A BUY/SELL CALL

Our Take

INSIGHT SCORE	VALUATION	LEVERAGE (D/E)	ORDER BOOK
64/100	Cheap vs Tata Power, roughly in line with Power Grid	1.33x	—

NTPC's 11.6x P/E is the cheapest of its power-sector peer group shown here, while its 15.1% ROE is comparable to or better than both Power Grid and Tata Power -- on today's numbers, this looks like a reasonably-priced, well-run utility. The FAVORABLE SIGNAL read reflects that combination, tempered by the scale of NTPC's committed Rs 16.68 lakh crore capex plan: executing a near-tripling of capacity over 11 years is a genuinely difficult undertaking, and today's cheap multiple could reflect the market not yet being sure NTPC will hit those targets, rather than a straightforward mispricing. This is a data snapshot, not a professional analyst's judgement call.

This is ClearStocks' own automated synthesis of the model output and the numbers above — not professional analyst commentary, and not investment advice.

SPECIFIC TRIGGERS, NOT A PREDICTION

What Would Change Our View (1/2)

WOULD MAKE US MORE POSITIVE	WOULD MAKE US MORE CAUTIOUS
• Debt-to-Equity is worked down from its current 1.33x — meaningful deleveraging would remove the balance-sheet overhang.	• P/E re-rates further above the Power Generation sector average (19.0x) while ROE stays flat — that would mean the market is pricing in growth the numbers don't yet show.

KEY TAKEAWAY › 1 triggers on each side above, all tied to numbers already shown elsewhere in this deck — the next page turns this into a simple quarterly re-check process.

HOW TO USE THIS PAGE EACH QUARTER

What Would Change Our View (2/2)

KEY TAKEAWAY › None of this is a prediction that any of these will happen — it's a checklist of exactly which numbers, from the sections already in this report, would change the read above if they moved. Re-check this deck against the next quarter's results using this page as the guide.

This is the one page in the deck designed to be reused, not just read once — bookmark it, and walk through both sides of the prior page's table every time BHEL reports results.

3-Year Trend-Based Forecast

This is not a professional forecast or a DCF model. It's a simple, mechanical projection: we take the actual growth rate this company posted over its last 4 years of available data, and extend that same rate forward. Real results depend on far more than a straight-line extrapolation of the past.

Not enough clean historical data to extrapolate a forecast for this stock.

4 MECHANICAL CHECKS RUN AGAINST THE NUMBERS ABOVE

Risk Flags

DEBT TREND	MARGIN TREND	FREE CASH FLOW	LEVERAGE
CLEAR Total Debt rising every year	CLEAR Net margin declining every year	CLEAR Most recent year negative	CLEAR Debt-to-Equity above 1.5x

KEY TAKEAWAY › All 4 mechanical checks come back clear — no rising-debt, declining-margin, negative-FCF or elevated-leverage pattern detected. This is not a full risk assessment; always verify independently.

Capital Expenditure (Rs Cr)	—	-24,819	-30,816	-41,335	-44,050
ROE	—	11.50%	12.95%	12.72%	13.31%

Glossary & Methodology

P/E Ratio — Price-to-Earnings: share price divided by earnings per share. Roughly, how many years of current profit it would take to earn back today's price.

P/B Ratio — Price-to-Book: share price divided by book value (net worth) per share.

ROE — Return on Equity: Net Income divided by Stockholders Equity — how efficiently a company turns shareholder capital into profit.

EBITDA — Earnings Before Interest, Tax, Depreciation & Amortisation — a proxy for core operating profitability before financing and accounting effects.

Free Cash Flow — Operating Cash Flow minus Capital Expenditure — cash actually left over after running and maintaining the business.

Debt-to-Equity — Total Debt divided by Stockholders Equity — how much of the balance sheet is funded by borrowing vs. owners' capital.

Debt-to-EBITDA — Total Debt divided by EBITDA — roughly, how many years of operating profit it would take to pay off all debt.

CAGR — Compound Annual Growth Rate — the constant year-over-year growth rate that would take a starting value to an ending value over a given number of years.

Common-Size Statement — Every financial-statement line shown as a percentage of Total Revenue for that year, making it easy to compare structure across years regardless of company size.

Insight Score — ClearStocks' own 0-100 model output, estimating how a stock's fundamentals rank against its peers based on historical patterns.

Data & methodology, in brief: financial history comes from this project's own fundamentals pipeline, sourced from company financial statements. Sector and competitor figures are computed live from the same Nifty 200 dataset the website uses — every peer is a real company with real, current figures, never a synthetic average. The 3-year forecast is a compound-growth extrapolation of each company's own historical CAGR, not a DCF model. Not included: Liquidity/Efficiency ratios (the underlying balance-sheet line items aren't in this data source) — omitted rather than estimated.

Thank you.

This concludes the ClearStocks Company Deck for NTPC — NTPC.

ClearStocks · An independent, personal research project

Refreshed monthly · Educational research only, not investment advice
