THE ONE-PAGE READ

Executive Summary

ONGC — Oil & Natural Gas Corporation Ltd.

Cheap vs peers (P/E, -29%)

INSIGHT SCORE	SECTOR	CURRENT PRICE	COMBINED READ
57/100	Oil Gas & Consumable Fuels	—	Trading below its sector's typical valuation on this metric.

- 58.89% promoter (Government of India) ownership limits free float and ties the stock to public-sector capex and policy cycles.
- Brokerage views are sharply split between bull and bear cases on this stock (see Analyst Perspectives in Section 5 for the specific points on each side).
- Revenue grew at a -1.3% CAGR over the last 3 years of available financial history (see Section 3).

This is a data snapshot for research purposes only — it is not investment advice, and it is not a recommendation to buy, hold or sell this stock. See the Disclaimers section at the end of this deck.

Key Statistics

Valuation Verdict: Cheap vs peers (P/E, -29%) · **Model Read:** Trading below its sector's typical valuation on this metric.

Company Overview

SECTOR	INDUSTRY	INDEX	ISIN
Oil Gas & Consumable Fuels	Oil Gas & Consumable Fuels	Nifty 200	INE213A01029

Oil & Natural Gas Corporation Ltd.

Founded 1956 (as the Oil and Natural Gas Directorate; incorporated as a statutory commission the same year) — India's largest crude oil and natural gas exploration & production company, operating both onshore and offshore fields (including the deepwater KG-DWN-98/2 block) across India, alongside a downstream and petrochemicals presence through subsidiaries and joint ventures including MRPL and OPaL. ONGC also holds a majority stake in HPCL, giving it exposure to downstream refining and marketing in addition to its core upstream E&P business..

Crude Oil (Upstream E&P)
Natural Gas (Upstream E&P)
Refining & Petrochemicals (via subsidiaries/JVs)
Downstream (via HPCL stake)

A full company profile, shareholding pattern, segment breakdown and industry context follow in Section 2 of this report.

SECTION 2

Company, Industry & Leadership

- Company Profile
- Shareholding Pattern
- Industry Context — Market Sizing
- Industry Context — Competitive Landscape
- Leadership
- Recent News

Company Profile

COMPANY AGE	HEADQUARTERS	BUSINESS SEGMENTS	INDEX MEMBERSHIP
70 years	Dehradun, Uttarakhand, India (registered office); New Delhi (corporate office)	4	Nifty 200

OWNERSHIP

The Government of India holds a controlling promoter stake of roughly 58.9%, making ONGC a public-sector oil & gas major. Domestic Institutions hold about 10.9%, Foreign Institutional Investors roughly 8.0%, Mutual Funds ~8.0%, and retail/public investors the remaining ~3.5% (with the balance spread across smaller categories).

OPERATIONS

India's largest crude oil and natural gas exploration & production company, operating both onshore and offshore fields (including the deepwater KG-DWN-98/2 block) across India, alongside a downstream and petrochemicals presence through subsidiaries and joint ventures including MRPL and OPaL. ONGC also holds a majority stake in HPCL, giving it exposure to downstream refining and marketing in addition to its core upstream E&P business.

Sources: [Choice India](#) — ONGC Shareholding Pattern

Shareholding Pattern

Promoter (Government of India)	58.89%
DII (Domestic Institutions)	10.86%
FII (Foreign Institutions)	8.01%
Mutual Funds	7.95%
Public / Retail	3.50%

Sources: [Choice India](#) — [ONGC Shareholding Pattern](#)

KEY TAKEAWAY › At nearly 59%, government ownership gives the state clear strategic control over India's largest domestic oil producer -- relevant given how directly ONGC's realizations are affected by government policy on windfall taxes, subsidy-sharing, and administered gas pricing.

Industry Context

ONGC's Q1 FY27 results (August 2026) showed standalone net profit more than doubling, up 112.3% YoY to Rs 17,034 Cr, with standalone profit before tax at a record Rs 22,848 Cr -- the company's highest-ever quarterly PBT. Standalone gross revenue rose 45.2% YoY to Rs 46,460 Cr. On a consolidated basis, PAT attributable to owners was Rs 11,899 Cr (+21.4% YoY) on consolidated gross revenue of Rs 2,04,987 Cr (+25.7%). The results were driven mainly by sharply higher crude realizations (US\$99.45/barrel vs US\$66.13 a year earlier) and higher new-well gas pricing (US\$13.31/MMBtu vs US\$8.24/MMBtu), even as production volumes stayed roughly flat: 4.452 million tonnes of crude oil and 4.756 billion cubic metres of natural gas (standalone), for combined oil and oil-equivalent gas output of 9.444 million tonnes. ONGC also announced capital investment exceeding Rs 40,000 Cr in Western Offshore operations with bp, targeting production growth from FY 2027-28 onward.

Sources: [ONGC Q1 FY27 Results — IndianPSU](#) · [ONGC Q1 profit more than doubles — Business Standard](#)

KEY TAKEAWAY › This quarter's profit surge was almost entirely a price story, not a volume story -- production was flat while realizations jumped sharply, which is exactly the pattern that makes ONGC's earnings highly sensitive to global crude price swings in either direction.

COMPETITIVE LANDSCAPE

Industry Context

Player	Category	Position vs. ONGC
Oil India Limited	PSU upstream E&P peer	A smaller, similarly government-controlled upstream oil & gas producer; the closest like-for-like comparison for isolating whether ONGC's results reflect company-specific execution or a broader favorable-pricing environment for Indian E&P.
Reliance Industries (O2C segment)	Diversified conglomerate with oil & gas/refining exposure	Far larger and more diversified, but relevant as a comparison point on how downstream refining margins interact with upstream crude pricing across the Indian energy sector.
Vedanta (Cairn Oil & Gas)	Private-sector upstream E&P operator	India's largest private-sector crude oil producer; a useful comparison on production growth trajectory versus ONGC's more mature, largely flat output base.

Sources: Univest — ONGC Share Price Target 2026

KEY TAKEAWAY › ONGC's scale gives it a structural advantage in upstream E&P within India, but as a government-controlled entity it also carries policy-driven costs (subsidy-sharing, windfall taxes) that privately-run peers like Vedanta's Cairn Oil & Gas don't carry in the same way.

SECTION 3

Financial Analysis

- Financial Snapshot
- Financial History & Growth Trends
- Financial Trend Charts
- Common-Size Statement

SECTION 3 OPENS WITH THE 3 NUMBERS THAT MATTER MOST

Financial Snapshot

P/E RATIO	P/B RATIO	RETURN ON EQUITY
6.8x	0.8x	11.1%

P/E Ratio	Roughly how many years of current profit it would take to earn back today's share price. Lower can mean cheaper — but only means something read against the sector average (Section 4), not alone.
P/B Ratio	Compares the share price to the company's accounting net worth per share. A P/B well above 1x means the market values the business far above its stated book assets.
Return on Equity (ROE)	How efficiently the company turns shareholder capital into profit. Consistently higher ROE than peers, at similar leverage, generally signals a stronger underlying business.

Full historical trend, growth-rate analysis, and chart-by-chart commentary follow over the next several pages of this section.

Financial History (last 4 years)

Metric (Rs Cr)	FY2023	FY2024	FY2025	FY2026
Total Revenue	629,510	598,644	608,953	605,276
Net Income	36,709	49,144	36,226	41,424
EBITDA	77,669	116,887	99,382	115,608
Total Debt	176,744	191,195	218,881	174,299
Stockholders Equity	284,545	339,069	343,440	371,768
Free Cash Flow	35,132	46,728	35,181	58,729
ROE	12.9%	14.5%	10.5%	11.1%
Year-over-year growth				
YoY Growth	FY2024	FY2025	FY2026	
Revenue Growth	-4.9%	+1.7%	-0.6%	
Net Income Growth	+33.9%	-26.3%	+14.4%	

KEY TAKEAWAY › Revenue grew at a -1.3% CAGR and Net Income at a 4.1% CAGR over the last 3 years of available data — profit growth outpaced revenue growth, suggesting improving margins.

FINANCIAL TREND ANALYSIS 1 OF 4

Revenue Trend

- Revenue grew -4% cumulatively from FY2023 to FY2026 (Rs 629,510 Cr → Rs 605,276 Cr), a -1.3% CAGR over 3 years.
- Growth has been uneven year to year (from -4.9% to +1.7%), rather than a smooth trend — consistent with lumpy, order-book-driven revenue recognition typical of capital-intensive project businesses.

KEY TAKEAWAY › ONGC's revenue trend over FY2023-FY2026 shown above — see the bullets for what's actually driving the shape of this line, not just its direction.

FINANCIAL TREND ANALYSIS 2 OF 4

Profitability Trend

- Net margin moved from 5.8% in FY2023 to 6.8% in FY2026 — expanding profitability on each rupee of revenue.
- Net Income CAGR (4.1%) has outpaced Revenue CAGR (-1.3%) — classic operating leverage: fixed costs are being spread over a larger revenue base.
- Profit dipped in FY2025 (Rs 36,226 Cr) before recovering — a single weak year rather than a multi-year decline.

KEY TAKEAWAY › Net Income for ONGC across FY2023-FY2026 — read alongside the Revenue Trend page to see whether profit is growing with, faster, or slower than revenue.

FINANCIAL TREND ANALYSIS 3 OF 4

Operating Profit vs. Leverage

- EBITDA margin moved from 12.3% to 19.1% over the period — a genuine improvement in core operating efficiency.
- Total Debt has fallen 1% over the period (Rs 176,744 Cr → Rs 174,299 Cr) while EBITDA grew — the balance sheet is deleveraging in absolute terms.
- At the latest EBITDA of Rs 115,608 Cr against Rs 174,299 Cr of debt, it would take roughly 1.5 years of current EBITDA to clear all debt — the Debt-to-EBITDA figure on the Leverage page.

KEY TAKEAWAY › EBITDA (operating profit) plotted against Total Debt for ONGC — the gap or convergence between these two lines is the core leverage story for this company.

FINANCIAL TREND ANALYSIS 4 OF 4

Return on Equity Trend

- ROE moved from 12.9% to 11.1% over FY2023-FY2026 — a decline in capital efficiency worth investigating alongside the margin trend.
- Shareholder Equity grew 31% over the period (retained profits accumulating on the balance sheet) — a larger equity base makes a given ROE % harder to sustain without proportionally larger profit growth.
- Average ROE across the 4 years shown was 12.3% — compare this to the Sector Comparison page to judge whether this is a structurally strong or weak return on capital for this industry.

KEY TAKEAWAY › ONGC's ROE trend — the Sector Comparison page next shows whether this is strong or weak relative to real sector peers, not just relative to its own past.

WHAT THIS TABLE MEANS

Common-Size Statement (% of Revenue) (1/2)

What is this? A common-size statement restates every P&L line as a percentage of that year's Total Revenue instead of a raw Rupee figure. That makes it possible to compare cost and margin structure across years (or against a peer of a different size) on a level footing — e.g. if Net Income was 4.8% of revenue in FY23 and 6.1% in FY26, profitability improved even if you ignore the absolute Rupee numbers entirely.

KEY TAKEAWAY › EBITDA margin moved from 12.3% of revenue in FY2023 to 19.1% in FY2026 — the full year-by-year breakdown, including Total Debt, Equity and Cash Flow as a % of revenue, is on the next page.

FULL TABLE, EVERY LINE ITEM

Common-Size Statement (% of Revenue) (2/2)

% of Revenue	FY2023	FY2024	FY2025	FY2026
Net Income	5.8%	8.2%	5.9%	6.8%
EBITDA	12.3%	19.5%	16.3%	19.1%
Total Debt	28.1%	31.9%	35.9%	28.8%
Stockholders Equity	45.2%	56.6%	56.4%	61.4%
Total Assets	102.1%	123.9%	124.6%	130.8%
Operating Cash Flow	13.7%	16.5%	14.9%	18.6%

Shows how each line item has moved relative to revenue over time — a shrinking Net Income % of revenue, for instance, means margins are under pressure even if revenue itself is growing.

KEY TAKEAWAY › Total Debt moved from 28.1% of revenue to 28.8% over this period (+0.7 points) — cross-check this against the Leverage & Solvency page later in this section, which shows the same trend as a hard Debt-to-Equity ratio.

SECTION 4

Peer & Sector Benchmarking

- Sector Comparison
- Competitor Benchmark
- Peer Positioning Map
- Leverage & Solvency Ratios

STOCK VS. SECTOR AVERAGE, AT A GLANCE

Sector Comparison — Oil Gas & Consumable Fuels

KEY TAKEAWAY › ONGC's P/E is 75% below its sector average — trading at a discount, which can mean overlooked value or a real, priced-in problem.

Note: the sector average shown is a current, point-in-time snapshot across sector peers — we do not fabricate a multi-year historic sector-average series, since our data source does not carry that history reliably enough to publish it as fact.

Competitor Benchmark

Company	P/E	P/B	ROE	Mkt Cap (Cr)
ONGC (this stock)	6.8	0.8	11.1%	295,196
RELIANCE	23.6	2.0	8.9%	1,772,085
COALINDIA	8.3	2.1	26.1%	255,969
BPCL	8.0	1.3	25.8%	134,886
GAIL	11.6	1.3	8.5%	114,012
OIL	9.5	1.4	11.4%	79,427
HINDPETRO	45.5	1.2	27.5%	75,857

Compared against its largest sector peers within the Nifty 200 by market capitalisation (real figures from the same dataset, not estimates).

KEY TAKEAWAY › Among its 8 largest sector peers, HINDPETRO has the highest ROE (27.5%) vs ONGC's 11.1% — worth understanding why before treating either figure in isolation.

VALUATION VS. QUALITY, AT A GLANCE

Peer Positioning Map

KEY TAKEAWAY › ONGC sits in the quadrant that is cheap with below-average returns — cheap for a reason until proven otherwise, relative to the peer set shown above.

BALANCE-SHEET RISK, VISUALIZED

Leverage & Solvency Ratios

Debt-to-Equity above ~1x, or Debt-to-EBITDA above ~3x, generally signals a more leveraged balance sheet — worth weighing against the sector norm before drawing conclusions.

KEY TAKEAWAY › Debt-to-Equity of 0.47x is below the ~1x watch level — leverage looks manageable on this measure alone.

Note: Liquidity ratios (Current/Quick Ratio) and Efficiency ratios (Asset/Inventory Turnover, Receivables Days) are not shown — our data source doesn't include Current Assets, Current Liabilities, Inventory or Receivables figures, so we're not able to compute these honestly.

SECTION 5

Valuation, Risk & Outlook

- Valuation Detail
- Why This Verdict
- Analyst Perspectives — Bull vs. Bear
- Our Take
- What Would Change Our View
- 3-Year Trend-Based Forecast
- Risk Flags

HOW CLEARSTOCKS REACHED THIS VERDICT — METHODOLOGY

Valuation Detail

WHAT THIS DOES CAPTURE	WHAT THIS DOES NOT CAPTURE
• Whether the stock is priced richer or cheaper than same-sector peers right now • A repeatable, mechanical comparison — same rule applied to all 200 stocks	• Whether the premium is justified by superior growth, order book, or moat • The company's own valuation history — only today's peer snapshot

KEY TAKEAWAY › ONGC is flagged **Cheap vs peers (P/E, -29%)** because its current multiple sits -75% vs peers — a data comparison, not a judgement on whether that premium is deserved.

INSIGHT SCORE METHODOLOGY

Why This Verdict

KEY TAKEAWAY › Trading below its sector's typical valuation on this metric. — a middling Insight Score combined with a valuation that's -75% vs peers is what mechanically produces this read; it is not a prediction of where the stock goes next.

Past patterns in fundamentals are not a guarantee of future results — this is a research signal, not investment advice.

THIRD-PARTY RESEARCH, PARAPHRASED & SOURCED

Analyst Perspectives — Bull vs. Bear

The views below are ClearStocks' own paraphrase of publicly reported brokerage/analyst commentary — not our own opinion, and not a reproduction of any single report. Each point is sourced.

THE BULL CASE	THE BEAR CASE
• If Brent crude recovers further from recent levels, some analysts estimate ONGC's EBITDA could improve by roughly Rs 6,000-8,000 Cr annually. • KG-DWN deepwater block gas volumes are expected by some analysts to grow 15-20% in FY27, adding to earnings at prevailing prices. • Potential upstream gas pricing reform (moving toward Rs 9-10/MMBtu from Rs 7.5/MMBtu) could add an estimated Rs 4,000-5,000 Cr to annual profit after tax. • The stock offers an attractive dividend yield (~4.6% based on FY25's Rs 11.25/share payout) and trades at a low ~8x P/E, which some analysts view as offering room for re-rating.	• ONGC's earnings are highly sensitive to crude oil prices -- a decline below roughly \$60/barrel is flagged as a key bear-case trigger. • Government subsidy-sharing burden is a recurring risk if petroleum product pricing to consumers isn't fully passed through, which can fall partly on upstream PSUs like ONGC. • A plateau in KG-DWN block production growth would remove one of the main earnings-growth levers analysts are counting on. • Broader macro headwinds, including the 26% US reciprocal tariff announced in April 2026, were flagged as a risk to global oil demand and by extension ONGC's realizations.

SCORECARD SYNTHESIS, NOT A BUY/SELL CALL

Our Take

INSIGHT SCORE	VALUATION	LEVERAGE (D/E)	ORDER BOOK
57/100	Cheap vs peers	0.47x	—

ONGC's Q1 FY27 profit surge was driven almost entirely by higher crude and gas realizations, not by production growth -- output stayed roughly flat. That's the central risk in owning this stock: its earnings swing heavily with global oil prices, a variable ONGC has no control over, and with government policy on subsidy-sharing and windfall taxes, which it also doesn't control. The new Western Offshore investment with bp is a genuine, if multi-year, path to eventual production growth -- but it won't show up in earnings for several years. This is a data snapshot, not a professional analyst's judgement call.

This is ClearStocks' own automated synthesis of the model output and the numbers above — not professional analyst commentary, and not investment advice.

SPECIFIC TRIGGERS, NOT A PREDICTION

What Would Change Our View (1/2)

WOULD MAKE US MORE POSITIVE	WOULD MAKE US MORE CAUTIOUS
• A sustained re-rating of the sector as a whole, independent of this company's own numbers.	• P/E re-rates further above the Oil Gas & Consumable Fuels sector average (27.3x) while ROE stays flat — that would mean the market is pricing in growth the numbers don't yet show. • Debt-to-Equity rises meaningfully above its current 0.47x — the balance sheet is a strength today, and that would erode it. • Net Income growth reverses and turns negative for two consecutive years — the current growth trend is doing a lot of the work in this verdict.

KEY TAKEAWAY › 1 trigger on each side above, all tied to numbers already shown elsewhere in this deck — the next page turns this into a simple quarterly re-check process.

HOW TO USE THIS PAGE EACH QUARTER

What Would Change Our View (2/2)

KEY TAKEAWAY › None of this is a prediction that any of these will happen — it's a checklist of exactly which numbers, from the sections already in this report, would change the read above if they moved. Re-check this deck against the next quarter's results using this page as the guide.

This is the one page in the deck designed to be reused, not just read once — bookmark it, and walk through both sides of the prior page's table every time ONGC reports results.

3-Year Trend-Based Forecast

This is not a professional forecast or a DCF model. It's a simple, mechanical projection: we take the actual growth rate this company posted over its last 3 years of available data, and extend that same rate forward. Real results depend on far more than a straight-line extrapolation of the past.

Metric (Rs Cr)	FY2026 (actual)	FY2027E	FY2028E	FY2029E
Revenue	605,276	597,408	589,641	581,976
Net Income	41,424	43,127	44,900	46,745

4 MECHANICAL CHECKS RUN AGAINST THE NUMBERS ABOVE

Risk Flags

DEBT TREND	MARGIN TREND	FREE CASH FLOW	LEVERAGE
CLEAR Total Debt rising every year	CLEAR Net margin declining every year	CLEAR Most recent year negative	CLEAR Debt-to-Equity above 1.5x

KEY TAKEAWAY › All 4 mechanical checks come back clear — no rising-debt, declining-margin, negative-FCF or elevated-leverage pattern detected. This is not a full risk assessment; always verify independently.

SECTION 6

Capital Expenditure (Rs Cr)	-50,930	-52,119	-55,674	-53,990
ROE	12.90%	14.49%	10.55%	11.14%

Glossary & Methodology

P/E Ratio — Price-to-Earnings: share price divided by earnings per share. Roughly, how many years of current profit it would take to earn back today's price.

P/B Ratio — Price-to-Book: share price divided by book value (net worth) per share.

ROE — Return on Equity: Net Income divided by Stockholders Equity — how efficiently a company turns shareholder capital into profit.

EBITDA — Earnings Before Interest, Tax, Depreciation & Amortisation — a proxy for core operating profitability before financing and accounting effects.

Free Cash Flow — Operating Cash Flow minus Capital Expenditure — cash actually left over after running and maintaining the business.

Debt-to-Equity — Total Debt divided by Stockholders Equity — how much of the balance sheet is funded by borrowing vs. owners' capital.

Debt-to-EBITDA — Total Debt divided by EBITDA — roughly, how many years of operating profit it would take to pay off all debt.

CAGR — Compound Annual Growth Rate — the constant year-over-year growth rate that would take a starting value to an ending value over a given number of years.

Common-Size Statement — Every financial-statement line shown as a percentage of Total Revenue for that year, making it easy to compare structure across years regardless of company size.

Insight Score — ClearStocks' own 0-100 model output, estimating how a stock's fundamentals rank against its peers based on historical patterns.

Data & methodology, in brief: financial history comes from this project's own fundamentals pipeline, sourced from company financial statements. Sector and competitor figures are computed live from the same Nifty 200 dataset the website uses — every peer is a real company with real, current figures, never a synthetic average. The 3-year forecast is a compound-growth extrapolation of each company's own historical CAGR, not a DCF model. Not included: Liquidity/Efficiency ratios (the underlying balance-sheet line items aren't in this data source) — omitted rather than estimated.

Thank you.

This concludes the ClearStocks Company Deck for ONGC — Oil & Natural Gas Corporation Ltd..

ClearStocks · An independent, personal research project
